

Online safety in online learning

NEET SYSTEM

Online Educational Escape Rooms to
Re-engage ESLs and NEETs

Currently, a third of the world's population is using some form of social media to communicate. Therefore, we should get acquainted with the rules of social media communication etiquette and principles of healthy communication.

The social media have a strong influence on our identity, our e-reputation, and our brand. It can be difficult to remove the information or images we do not want to be public any longer. For this reason, it is important to regularly check the information the internet provides about you and have your privacy settings under control.

The skills of using the internet effectively and responsibly are called “digital citizenship”. Good digital citizenship represents creating lasting relationships, expressing empathy with other users, mastering digital literacy, securing digital devices and setting aside time away from digital devices.

Fake news has become a growing phenomenon on the internet and the need for critical thinking has become apparent. It is very important to check news sources and dates, be attentive toward photos, make questions and do your independent research.

The attention should be paid to the risk connected with not protecting your privacy and personal information. Be especially attentive to keeping your personal information private and create strong passwords.

In conclusion, social media provide us many benefits, but we must still bear in mind that some rules concerning communication, critical thinking and keeping our privacy should be followed.

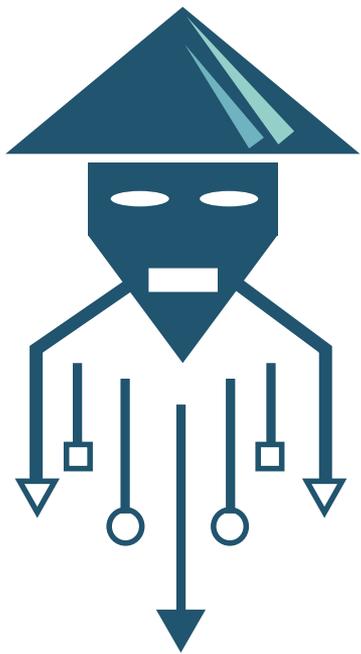

If you want to get more information about this topic, do not hesitate to study our additional resources.
